INTRODUCTION... The Power In Your Tongue

PART ONE... Her Sensitive Spots

PART TWO... Before Going Down On Her

PART THREE... Oral Sex Proper (do's & don'ts)

CONCLUSION

INTRODUCTION

This free eBook can be worth thousands of Naira to you especially if don't last up to 25 minutes during sex. It will be the best thing that has happened to your sex-life if you study and follow its directions.

HOW?

By spending about 15-20 minutes giving your woman oral sex in bed, you not only increase the *lash* duration which starts counting from the moment you start kissing and pulling off your clothes but you also reduce the time you have to spend *lashing* her before she gets to climax.

IF YOU UNDERSTAND THE SECRET TECHNIQUES I'M GOING TO REVEAL TO YOU IN A FEW MINUTES AND PRACTICE THEM WHENEVER YOU GO DOWN ON YOUR WOMAN THEN, HER LOVE FOR YOU WILL KNOW NO BOUNDS.

There is no more guaranteed way to make a woman come than going down on her with a trained hand and tongue. According to studies and if you have

read my book *How To Give Any Woman An Earth Shattering Orgasm*, you will know that vaginal penetration alone will hardly get a woman to climax during sex.

THE POWER IN YOUR TONGue...

When you fully understand how to use your tongue and fingers like a love-expert when making love to your woman then you will come to terms with the fact that there is power in your tongue.

With your tongue alone you can lick and tease a woman's erogenous (sensitive) zones and get her shaking and dying from intense pleasure. You can give her what most women never get in a lifetime—an Orgasm.

Most men are pretty comfortable with giving orals to a woman while others won't even try. Or when they do, it is only a quick formality before sex. This is very wrong and will get in the way of her satisfaction.

All you need is a little coaching and guide from someone (me) who has been down that road and I'm here to do just that.

**WHAT I TEACH YOU ARE GUARANTEED EXPERIENCES
GOTTEN FROM 5 YEARS OF TRIAL AND ERROR.**

5 long painful years of trying to hold on to a relationship that wasn't working because of my inability to satisfy my girl in bed.

**5 Years Of Intense Learning All Rolled Up Into A Small
FREE eBook For YOU!!!**

PARt ONE

HER SENSITIVE Spots...

When you caress a woman, I want you to pay specific attention to some areas of her body called the Erogenous Zones (E.Z) which I also call the Hot Spots. These are areas in a woman's body will definitely set her on fire sexually when touched and caressed with expertise!

NOTE: *never go down straight to her nether regions at first without paying at least 10 minutes of attention to her E.Zs*

- **The neck**
- **The inner thighs (avoiding her love-spot)**
- **Her lips**
- **Her buttocks**
- **Her feet**
- **Her stomach (navel area)**
- **Her vagina/clitoris**

In short, you should leave no part unchecked and *uncaressed*. A woman's body structure (anatomy) is quite different from that of a man's.

A man is quite easy to turn on, all he has to see are a pair of boobs and ass and he is ready to tango. A woman on the other hand is complex and should be treated with expertise and caution if you really wanna take her to an **ORGASM** which is the reason you're reading this in the first place.

IGNORING THESE SPOTS AND MOVING IN STRAIGHT FOR HER LOVE-SPOT SHOULD BE AVOIDED AT ALL COST.

But what exactly do I mean...?

I mean that you have to navigate her body with your tongue, your fingers, pay attention to her curves and body with your all of your attention and essence.

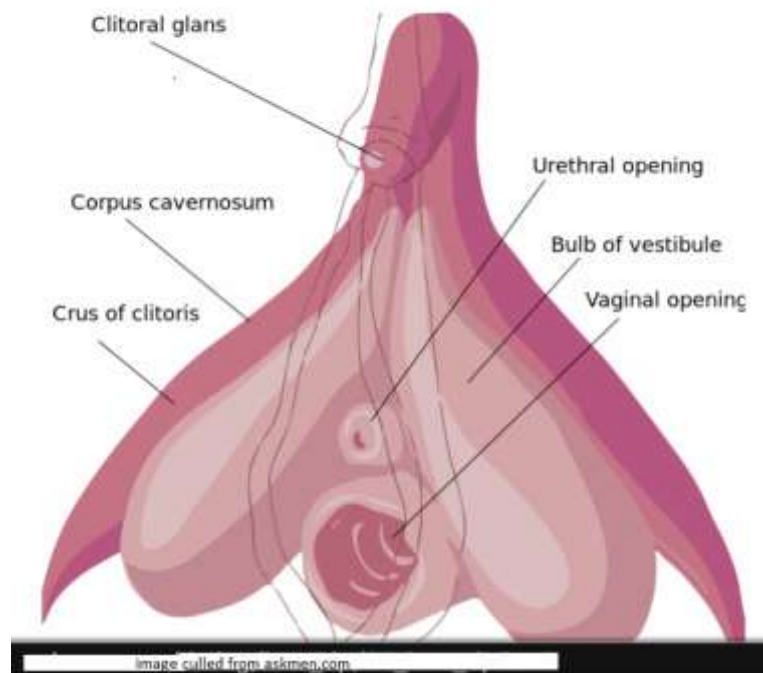

**AVOID THE URGE OF RUSHING THINGS AND PENETRATING
AFTER 3 MINUTES OF TOUCHING HER BODY!**

Women are sensitive creatures and will notice the effort and rapt attention you're paying her body and these will greatly increase her libido and the chances of a climax in her.

Kiss & tease the hell out of body till she trembles, following the guide I laid out in my book *How To Give Any Woman An Earth Shattering Orgasm* till she is dripping wet and moaning for more of you!

And also pay close attention to her nipples...

YOUR GOAL IS TO make her so horny & wet USING YOUR TONGUE.

A labelled image of the vagina just for your directions when you go down on her.

PART TWO

BEFORE GOING DOWN ON Her...

A WOMAN'S VAGINA IS EXTREMELY DELICATE (more than the head of your penis). Millions of nerve ending are packed into that one area.

Touch her the right way and give pleasure; touch her the wrong way and cause her pain.

Giving a great oral is not easy, but if you follow my lead you'll become amazingly great in no distant time.

Before going down on a woman, you have to keep certain things in place first and I'm going to help you with a list of what and what you should keep in place if the idea of oral sex ever crosses your mind.

IGNORING THESE TIPS WILL RUIN EVERY CHANCE YOU MAY HAVE AT GIVING HER THE PERFECT ORAL SEX...

- **CLEANLINESS/HYGIENE.** Whether you know it or not, the nether regions aren't the cleanest part of a person's body. There is a smell down there. And I don't mean a bad smell.

Every human being has scent glands that gives you a distinctive smell/essence. Your armpits, your balls and her pussy all have a particular scent which you may have noticed. Animals (especially dogs) have enhanced ability to distinguish this scent from person to person.

My point is, she may feel a little self-conscious when you head down, so it's expected that a shower before oral sex will keep the both of you confident, fresh and sexy.

- **THE BUILDUP.** This is like the warmup exercises you do before any soccer game or before any sporting activity at all. You have to warm her up in anticipation of the main event.

In fact, it is a big turn-off if you go down her groin without building up the sensual anticipation. It could be painful for her and may cause her to say no to sex entirely. And we both know we don't want that.

This is what most people call foreplay. Kiss, caress, cuddle, suck, spank, massage and stimulate her E.Zs till she's all wet before going down south.

- **A FACE TOWEL.** In addition to other stuffs, a face towel should also be kept handy. **GIRLS EJACULATE JUST THE SAME WAY MEN DO.** This is called **Squirting**.

Majority of girls have never experienced this and sadly won't as most men aren't experienced and most girls hold themselves back.

Assure your girl to let go and relax before you start. And if for any reason she feels the slightest urge to pee or if she gets any peeing sensation as you work her with your tongue, she shouldn't hold it back.

The amount of fluid squirted differ from individuals. But to avoid surprises, have a towel handy and tell her it's the most amazing thing you've seen if it happens. Acting weird and shocked may ruin the party.

Some squirt in such a small amount that it may be mistaken for pee.

- **A LUBE.** Make sure to keep a lube (lubricant) handy. Girls differ. And one girl may take more time to get excited and wet than the other. You must always have a lube by your bedside if you ever want to engage in sex and just in case she has trouble getting wet fast enough as is the case with women who are breastfeeding, taking oral contraceptives or post-menopausal.

Dryness or delayed moistening of the vagina may be as a result of a decline in estrogen (a hormone responsible for that).

Have you ever been in bed with a girl and in the middle of the *lashing*, she starts complaining of pains?

This is the point where expertise comes into play.

WHAT DO YOU DO? USE A LUBE!

part Three

ORAL SEX PROPER...

This is the point you've been waiting for. Oral sex a.k.a cunnilingus. I'm going to show you now a step-by-step guide on how to take her to heaven on the wings of ecstasy using these simple tricks.

Obviously, what worked for Nkechi or Tanya may not work for Lucy or Toyosi. If you stick with my instructions, you'll likely give her the best oral of her life. Read on to find out how...

STEP 1. The comforting stage.

This part involves everything I said earlier about hygiene, warming her up and setting the mood.

Trail a hot path with your tongue as you kiss her down her jaw, her neck, her tummy, down to her navel/belly button. If you get to her belly button and she doesn't stop you, then everything is groovy.

If on the other hand, if she resists, tell her in a low assuring tone that you've got this under control. Assure her that you promise to make it memorable for her.

Women need to know you're confident and sure of your actions. They need you to take the lead. Confidence is damn sexy!

STEP 2. Positioning.

This part is one of the most important part of oral sex. It involves both the comfort of your partner and yours as well. **THE WRONG POSITIONING WILL GIVE YOU A NECK CRAMP OR GIVE HER LESS PLEASURE.**

The right positioning will also make it easy for you to locate the ultimate **G-spot** which is has forever deluded most men from time immemorial.

- **STANDING:** have her to stand while you kneel. Make sure not to squat as you'll get uncomfortable with time. Lift one of her legs over your shoulders in other to gain more room into her. Also make sure she leans against a wall or pillar as the sensations about to hit her may make her dizzy and lose her stance.
- **LYING DOWN:** have her on lying on her back. Put a pillow or two under her butt to lift her pelvis up, which will give you a better view and access into her vagina. This elevated position will make her feel fantastic and a little wild (like a bad girl feel). Keep her legs wide open. The wider the better opening you have to work with. It helps

the sensation. You may want to kneel with a pillow between your knees for cushioning. Or you can lie down with your face in between her legs.

- **ELEVATED PANEL:** sit her on a chair or table with her hips piercing on the edge in order to give you easy access. Have either one or both her legs over your shoulders and get to work.

STEP 3. Kill.

This is the point where you go in for the kill.

You must start off in a teasing manner at first. Start by kissing her inner thighs and the pubic hairline below her navel. Pull them slightly with your lips. A slight lick of the tongue up and down is good the outer lips of the vagina (the Corpus cavernosum & Crus of clitoris on the diagram above).

**SPEND SOME TIME ON THE OUTER LAYERS BEFORE SPREADING
HER VAGINA LIPS.**

It should be like a rising wave. Then you build up momentum. Making sure to follow her body language, knowing when to slow than and when to continue doing just what you do. Judge your moves based on her reaction.

Don't make her feel hurried. Some women like hard pressure while others prefer a lighter touch.

You may spread her vagina lips and go in with your tongue to the inner smaller lips. Move an arm under her leg and grab her hips. Or let it rest on her pubic hair. Keep it shallow at first.

Your tongue and jaw will feel tired after a while. When you need to rest, you may massage her swollen mold with your palm.

Go in deep later. You may insert a finger and maybe two with your tongue still in place inside her (this may be uncomfortable to some women). Just

slide the finger/s in and out or all directions but with a particular pattern still paying attention to her body reactions.

NOTE, your goal is to make her feel good not to make her orgasm. So, do not be so focused on making her come that you forget that she may not always come each time you give her orals. When you act like it's the only place in the world you'll rather be, then it'll be very pleasurable to her.

The G-spot...

To locate the G-spot which is the core of all pleasures a woman feels, insert a finger or two into her now. She will be probably wet by now. When your fingers are in position and after a few minutes of sliding in and out, turn your hands upwards so you can see your palm then make a 'come here' sign with the fingers inside her.

You will feel a bump the size of a peanut or maybe bigger or smaller. It may feel spongy. **THAT IS THE ALMIGHTY G-SPOT.** Rub it with your fingers in a circular motion and watch your woman go crazy!

Now, I want you not to mistake the G-spot with the clitoris. They are quite separate.

See the diagram above to see the location of the clitoral gland. It is located outside the vaginal opening.

The above steps alone are enough but stimulating the clit is necessary too.

cONCLUSION

To conclude, I'll give you a list of do's & don'ts you must abide with as you thrill your lover with the hidden powers of your tongue.

IGNORING THE POINTERS BELOW WILL NULL YOUR ENTIRE EFFORTS AT GETTING HER TO CLIMAX OR FEEL GREAT AS THE CASE MAY BE OR SHE MAY SAY NO ENTIRELY TO THE IDEA OF *LASHING* YOU. AND TRUST ME THAT WILL NOT FEEL GOOD.

I'll start with my list of don'ts...

- **Do not use a vibrator or dildo on her unless she comes up with the idea herself or unless she agrees to it after you raised it.**
- **Do not get too much saliva into her while giving her oral. Do not spit into her.**
- **Do not focus so much on making her come while giving her orals that you lose focus of your initial goal—to make her feel good.**
- **Do not think oral sex is safe sex. Oral sex is the major route of transmission for oral HPV.**
- **Do not jab at her with your tongue or finger. You wouldn't want a girl to jab at your balls, would you?**
- **Avoid lubes with glycerin if your partner suffers from vaginal yeast infection of any type. Because glycerin is a sugar and yeasts feed on sugars.**
- **Do not use oil base lubes with a latex condom. It weakens the latex.**
- **Do not use all lubes you find online. Some could cause her irritations.**

Now, over to the Do's...

- Be patient while going down on her.
- Talk dirty (another way of saying talk sexy).
- Be gentle and stop whenever she tells you to.
- Follow all the directions I stated above and you'll be just fine.
- Maximize the moment and **GET HER TO DO ANYTHING YOU WANT IN BED** by reading up on how to give her multiple orgasms in my book *How To Give Any Woman An Earth Shattering Orgasm*.
- Get to work. Practice. And come back to this guide when lost.

**DO NOT LET THE BUILT UP PLEASURE STOP HERE,
FOLLOW IT UP ASAP WITH A MIND-BLOWING
LASHING AS I LAID OUT IN MY BOOK *How To Give
Any Woman An Earth Shattering Orgasm*.**
